

# Sales Data Cleaning & Analysis Project

A complete dashboard-based analysis using sample sales data.

# 1. Objective

To clean the dataset, compute KPIs, and build a dashboard for business insights.

# 2. Dataset

Sample sales dataset from Kaggle used for analysis.

# 3. Data Cleaning Steps

- 1 Removed duplicate records
- 2 Handled missing values
- 3 Converted date column into proper format
- 4 Standardized categories
- 5 Removed outliers

# 4. Key Performance Indicators

- 1 Total Sales
- 2 Total Orders
- 3 Average Order Value
- 4 Total Profit

# 5. Dashboard Overview

The dashboard includes KPI cards, sales trends, regional analysis, product performance, and category distribution.

## **6. Charts Explanation**

- 1 Line chart showing monthly sales trend
- 2 Bar chart comparing sales by region
- 3 Horizontal bar chart for top products
- 4 Pie chart showing category contribution
- 5 Column chart showing monthly orders

## **7. Key Insights**

- 1 West region contributes highest sales
- 2 Technology category dominates
- 3 Peak sales in August
- 4 Top products generate major revenue
- 5 Sales fluctuate seasonally

## **8. Recommendations**

- 1 Focus on high-performing regions
- 2 Promote top-selling products
- 3 Improve low-performing categories
- 4 Plan inventory based on seasonal demand
- 5 Use targeted marketing strategies
